ACIA Arctic Climate Impact Assessment.
Progress Report for the Arctic Council’s Senior Arctic Officials. Oulu, Finland. May 15, 2002.

Disclaimer: This document may not be the final or approved version. It may be a working or draft version, as submitted to one of our Senior Arctic Officials meetings. Drafts are available in order to provide historical perspective on the work of the Arctic Council and the development of our scientific reports and assessments. To find final, approved versions of our reports and assessments, please make note of the title and visit the appropriate collection in our archive. Each collection listed below contains final documents from one of the six Working Groups. https://oaarchive.arctic-council.org/handle/11374/1, https://oaarchive.arctic-council.org/handle/11374/617, https://oaarchive.arctic-council.org/handle/11374/126, https://oaarchive.arctic-council.org/handle/11374/3, https://oaarchive.arctic-council.org/handle/11374/52, https://oaarchive.arctic-council.org/handle/11374/4 Any citation of an Arctic Council document must include reference to the author. If no author of a particular document is identified, the document may still be cited; in these cases, the Arctic Council should be listed as the author. Downloaded from the Arctic Council Open Access Repository. https://oaarchive.arctic-council.org/
Objective:

Climate variability and change, and increases in UV radiation, have become important issues in the Arctic over the past few decades. It has become imperative to examine possible future impacts on the environment and its living resources, on human health, and on relevant economic sectors. The Arctic Climate Impact Assessment is expected to lead to useful information for the nations of the Arctic region, their economy, resources, and peoples.

ACIA Products:

Three major volumes will be completed by 2004 for submission to the Arctic Council through AMAP, CAFF, and IASC; they are a peer-reviewed scientific volume, a synthesis document summarizing results, and a policy document providing recommendations for coping and adaptation measures. The seventeen chapters of the scientific volume of the assessment are organized under five major headings:

I. Introduction and Overview
II. The Arctic as Part of the Global Climate System
III. Physical and Biological Systems and their Response to Climate Change
IV. Impacts of Climate and UV Changes on Humans and their Activities
V. Synthesis

Climate Scenarios:

The ACIA is using a single IPCC-type scenario, i.e. the SRES B2 scenario. B2 is a "moderate" climate change scenario and it contains projections out to the year 2100. The B2 scenario is being implemented on five climate models (GCMs) that are readily available to scientists in North American and European centers: Canadian Climate Center, NCAR, GFDL, Hadley Center, and Max Planck Institute. Time slices around 2020, 2050 and 2080 are being used, which are the ones also used by the IPCC.
Two figures illustrate the climate scenarios derived from computer models for the Arctic. Fig. 1 shows changes in annual mean temperature (°C) for a doubling of CO₂, from a composite of 19 GCMs (from the ACIA Stockholm Report). Fig 2. illustrates the generally good agreement between four of the models used by the ACIA (results from the fifth were not yet available) of annual mean temperature changes in the Arctic as a function of time. These results are part of the climate scenarios now being used for the assessment.

Chapter Writing:

The writing of the 17 ACIA chapters is being done by lead and contributing authors, guided by the ACIA Assessment Steering Committee (ASC), which will hold its next meeting in Oslo, Norway in early June. About 180 lead and co-lead authors, contributing authors, and consulting authors have been selected from all Arctic countries as well as scientist from other nations with strong Arctic scientific capabilities. A substantial number of workshops of the chapter writing groups have been held and a first draft of the scientific report will be ready for internal review by November 2002. Revisions and external review will follow and the project is on schedule.

Webpage

The ACIA webpage, which contains details on ACIA, can be found at: http://www.acia.uaf.edu/

Fig. 1
Changes in annual mean temperature (°C) for a doubling of CO₂, from a composite of 19 General Circulation Models (ACIA Stockholm Report).
Fig. 2

Projections of Arctic surface air temperatures by four GCMs selected by the ACIA.
### ASSESSMENT TIMETABLE FOR SCIENTIFIC DOCUMENT

#### 2001
- **ASC Meetings**: Reykjavik, Ottawa
- **First Draft**: Chap. Drafts Due
- **Second Draft**: 1st Complete Report Draft
- **Third Draft**: Graphics/Editing, 1st Round of Comments Due
- **Printing and Distribution**:

#### 2002
- **ASC Meetings**: Oslo, US
- **First Draft**: 1st Complete Report Draft
- **Second Draft**: Graphics/Editing, Internal Review
- **Third Draft**: Comments Due
- **Printing and Distribution**: Graphics/Editing, Final Revisions

#### 2003
- **ASC Meetings**: Europe, US
- **First Draft**: Comments Due
- **Second Draft**: Graphics/Editing, Comments Due
- **Third Draft**: Comments Due
- **Printing and Distribution**: Final Editing, Printing

#### 2004
- **ASC Meetings**: Europe
- **First Draft**: Comments Due
- **Second Draft**: Graphics/Editing
- **Third Draft**: Comments Due
- **Printing and Distribution**: Final Edition, Distribution
