Disclaimer: This document may not be the final or approved version. It may be a working or draft version, as submitted to one of our Senior Arctic Officials meetings. Drafts are available in order to provide historical perspective on the work of the Arctic Council and the development of our scientific reports and assessments. To find final, approved versions of our reports and assessments, please make note of the title and visit the appropriate collection in our archive. Each collection listed below contains final documents from one of the six Working Groups. https://oaarchive.arctic-council.org/handle/11374/1, https://oaarchive.arctic-council.org/handle/11374/617, https://oaarchive.arctic-council.org/handle/11374/126, https://oaarchive.arctic-council.org/handle/11374/52, https://oaarchive.arctic-council.org/handle/11374/3, https://oaarchive.arctic-council.org/handle/11374/4 Any citation of an Arctic Council document must include reference to the author. If no author of a particular document is identified, the document may still be cited; in these cases, the Arctic Council should be listed as the author. International Circumpolar Surveillance: *infectious disease surveillance in the Arctic*

- Progress
- Main Outcomes
- Recommendations for Future Activities

Alan J. Parkinson
Arctic Investigations Program
US Centers for Disease Control & Prevention
Objectives …

- Establish an integrated network of hospital, public health, and reference laboratories throughout the Arctic
- Monitor infectious disease rates & trends
- Identify risk factors for disease
- Evaluate intervention options
- Monitor intervention effects
Progress to Date….

◆ 1998- Working group established
  ● US/Canada
    ◆ Priority diseases identified
      ○ Invasive bacterial diseases, Tb, RSV, Cancer, STD’s

◆ 1998-99 US/Canada Pilot ICS
  ● Invasive pneumococcal disease
    ◆ International QC program established

◆ 2000 ICS Accepted as an Arctic Council SDU Human Health Project.

◆ 2000-2001 ICS Invasive pneumococcal diseases
  ● US Arctic, northern Canada, Greenland, Iceland, Norway, Finland and Sweden.
Main Outcomes...

◆ ICS is feasible!
◆ Pneumococcal disease rates
  ● Indigenous people, young children (< 2 years) and elderly persons (> 65 years) residing in Alaska or Northern Canada have high rates of invasive pneumococcal disease.
  ● Rates vary by region within Alaska and northern Canada
  ● The case fatality rate (CFR) in Alaska was over three times the CFR in Northern Canada or Iceland.
Main Outcomes...

- Pneumococcal disease is vaccine preventable
  - For Alaska, N Canada, Iceland and Finland:
    - >80% of cases in persons ≥ 2 years of age were potentially preventable with use of the 23-valent polysaccharide vaccine
    - 49-82% of cases in children < 2 years of age were potentially preventable with use of the 7-valent conjugate vaccine.
  - For Alaska and N Canada:
    - 76% of deaths were potentially preventable with use of the 23-valent polysaccharide vaccine.
    - Further evaluations of vaccine use and efforts to improve vaccine coverage are needed.
Recommendations for Future Activities...

- Expand pathogens
- Expand ICS participants/steering committee
  - Russian Federation, Indigenous peoples organizations
    - Barents Sea, Chukotka, Kamchatka, Yakutia
- Expand International QC program
  - Other pathogens/countries
- Link with other networks
  - WHO, EU, PAHO
- Expand to include other non infectious diseases
  - Chronic diseases, birth defects, intentional/unintentional injury
- Explore linkage/role in AMAP, climate change initiatives
